"X-ray crystal structure and solution fluorescence characterization of Mg.2'(3')-0-(N-methylanthraniloy) nucleotides bound to the Dictyostellum discoideum myosin motor domain.";

J. Mol. Biol. 274:394 407(1997).

-I- FUNCTION: MYOSIN IS A PROPEIN THAT BINDS TO ACTIN & HAS ATPASE ACTIVITY THAT IS ACTIVATED BY ACTIN.

-I- SUBUNIT: MYOSIN II HEAVY CHAIN IS TWO-HEADED. IT SELF-ASSEMBLES INTO FILAMENTS. HEXAMER OF 2 HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) AND 2 REGULATORY LIGHT CHAIN SUBUNITS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         X-RAY CRYSTALLOGRAPHY (2.1 ANGSTROMS) OF 1-762.

MOI. BIOI. 190:291-317(1986).

11. FUNCTION: MUSCLE CONTRACTION.

12. FUNCTION: MUSCLE CONTRACTION.

13. SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

14. SUBURIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

15. SUBCELLULAR LOCATION: THICK FILAMENTS OF THE MYORIBRILS.

16. DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEDTAPEDTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILES.

16. PTM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). TO CAN LATER BE SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Strehler E.E., Strehler-I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NUCLÈIC ACIDS RES. 16:4737-4737(1988).

1 - FUNCTION: MUSCLE CONTRACTION.

2 - - SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

2 HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

3 HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

4 HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

5 HEAVY CHAIN SUBUNITS (MLC-2).

6 LOUGHLANDORY LIGHT CHAIN SUBUNITS (MLC-2).

7 LOWAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CONCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,

8 C CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,

9 C CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,

10 C CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,

11 C CHARACTERISTIC FOR ALPHA-HELICAL COTLED COLLS.

12 C CHARACTERISTIC FOR ALPHA-HELICAL COTLED COLLS.

13 C CHARACTERISTIC FOR ALPHA-HELICAL COTLED COLLS.

14 MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN OAN BE SPLIT INTO 1 LIGHT MEROMYOSIN (HMM). IT CAN LATER BE SUBTRAGMENT (S2).

15 SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.

16 SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.
                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. -I- SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2
-I- SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2
-I- SUBCELLULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS.
-I- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING
-I- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING
-I- CYCLES OF A 28-RESIDUE REPEAR PATTERN COMPOSED OF 4 HEPTAPEPTIDES,
-I- PTM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY
ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY.
-I- MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT
-MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). IT CAN LATER BE
SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
STREED FOR MYOSIN SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN-BALB/C, A/J, C57BL/6J, AND DBA/2J;

MYOSIN HEAVY CHAIN, NONMUSCLE TYPE A (CELLULAR MYOSIN
MYOSIN HEAVY CHAIN-A) (NMMHC-A). SEQUENCE FROM N.A.

Choi O.H., Park C., Itoh K., Adelstein R.S., Beaven M.A.;
Submitted (JUL-1995) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: CELLULAR MYOSIN APPEARS TO PLAY A ROLE IN C
CELL SHAPE, AND SPECIALIZED FUNCTIONS SUCH AS SECRETI-MYH9\_RAT Q62812; Rattus norvegicus (Rat). Eukaryota; Metazoa; Chordata; Mammalia; Eutheria; Rodentia; + NCBI\_TaxID=10116; CAPPING.

SUBUNIT: MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC-2).

REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, CYCLES OF A 28 RESIDUE REPEAT PATTERN COMPOSED OF 4 HEFT CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.

SIMILARITY: CONTAINS 1 IQ DOMAIN. STANDARD; Craniata; Vertebrata; Sciurognathi; Muridae; PRT; 1961 ₹ SECRETION Euteleostomi; ; Murinae; Rat HEAVY (MLC) AND 2 CYTOKINESIS, AND Rattus.

CC -!- FUNCTION: MUSCLE CONTRACTION.

CC -!- FUNCTION: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

CC -!- SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

CC -!- SUBCELULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS.

CC -!- SUBCELULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS.

CC -!- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CC -!- DOMAIN: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY CC CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

CC -!- PTM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY CC ALKYLATED AND ARE RESULTED FOR MYOSIN ATPASE ACTIVITY.

CC -I- MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). IT CAN LATER BE CC SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "Complete nucleotide sequence of full length cardiac myosin heavy chain.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Kraft R., Bravo-Zehnder M., Taylor D.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE-90016823; PubMed-2798112;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rattus norvegicus
                                                                                                                                                                                                                                             AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

SUBCELLULAR LOCATION: THICK FILAMENTS OF 12 MLC-2).

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPPAPEPTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

PTH: TMO CYSTEINE RESIDUES IN THE S1 DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY.

MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). IT CAN LATER BE SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 POOLS.

SUBFRAGMENT (S2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14
                                                                                                                                                                                                                                                                                                                                                                                                               . Heart J. 5:181-191(1984).
FUNCTION: MUSCLE CONTRACTION.
SUBUNIT: MUSCLE CONTRACTION.
SUBUNIT: MUSCLE WYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS
HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC-2).
AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

C --- SUBUNIT: MUSCLE CONTRACTION.

C --- SUBUNIT: MUSCLE WOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2

C HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

C HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

C HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

C HEAVY CHAIN SUBUNITS (MLC-2).

C --- SUBCELLULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS.

C --- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28 RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

C CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

C --- THOU CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY.

C ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY.

MEROMYOSIN (LMM) AND I HEAVY MEROMYOSIN (HMM). IT CAN LATER BE SPLIT INTO 1 LIGHT MEROMYOSIN (LMM) AND 1 ROD-SHAPED

SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
